HOME CARE LINE

*Care and
maintenance
guide*

Outdoor Living!

Outdoor Living!

If your garden landscaping includes beautiful wood or wood composite decking, a nice swimming pool, outdoor furniture or sun shades, it requires special, ongoing maintenance. This is why it is essential to use products that have been specifically created for producing good, long-lasting results. UV rays and bad weather are pitiless on even the most resistant material, and household products have not been developed with this in mind.

Star brite® has been rising to this challenge for several years, relying on 40 years of experience in yacht maintenance.

Chemists have teamed up with major global chemical suppliers, particularly large French chemical groups, with the aim of developing new formulas with even better performance.

Once again, Star brite® is launching a new selection of highly efficient, easy-to-use products in 2015, perfect for maintaining all types of new material that suffer from the effects of the weather.

Jean-Paul Kitzinger
Director, Star brite Europe

Star brite® : 40 years of innovation!

Star brite® was founded in the nineteen seventies in Florida and rapidly became known for the incomparable quality of its maintenance products for yachts and boats.

A decade later, after becoming the American n°1 manufacturer of boat maintenance products, Star brite® decided to set up in Europe.

In the 1990s, Star brite® acquired a new, high-performance production plant, Kinpak Inc., enabling the company to manufacture more than 400 Star brite brand articles and distributors' branded products.

Star brite® has quickly become the leader on the nautical products market in most European countries.

In the middle of the last decade, it decided to start diversifying into the outdoor sector in Europe, encouraged by the company, Synkro System.

Synkro System, nowadays Star brite France, offers a whole range of very high technical quality products for maintaining wood, wood composite, stone, PVC, polyethylene and other plastic materials, fabrics, stainless steel and other materials used outdoors.

Outdoor Multi-purpose Cleaner

NOVELTY
2015

Multi-purpose Cleaner

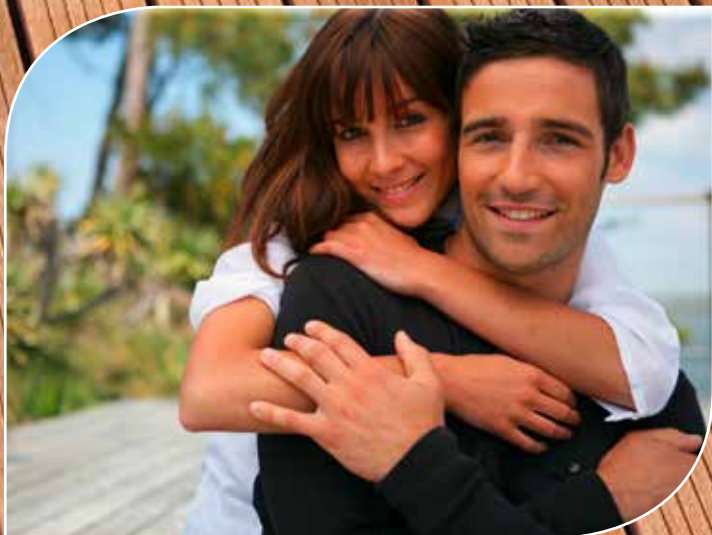

The Star brite® range includes a new **multipurpose maintenance product** that is suitable for cleaning most outdoor surfaces.

This user-friendly product is **ready to apply**. All you need to do is spray a tiny amount of the product on the surface to be treated, rub lightly with a damp sponge and rinse off. **This user-friendly** product works **immediately** and is **not expensive!**

It lets you go out onto your balcony or patio, or into the garden, with the same bottle and clean the frames of your awning, your railings, thermal-coated aluminium or PVC garden furniture, and plastic, resin wicker or painted metal furniture. You can also clean the fat off your barbecue and surrounding area, as well as clean many other items in your garden!

650 ml
Ref. 5522

Wood patio

Wood is a natural, living element of our environment. Whatever form it is used in, it is crucial to maintain it and protect it against all environmental aggressions. And because good maintenance ensures that your equipment lasts a long time, Star brite® recommends that you protect your patio and wooden furniture.

Stay safe! A patio that is not maintained is slippery and dangerous!

Star brite® products can be used on all types of tropical wood (teak, ipe, tali, bankirai, massaranduba, iroko, black locust, etc.), resinous wood (high temperature-treated or autoclave-treated wood, douglas pine, red cedar, larch, etc.) and hardwood (oak).

Protect your new patio

1] Maintaining a new patio as soon as it is delivered

1.1. Warning before applying the Protector

Ensure that the wood has not been treated with a protective coating while in the factory. If this is the case, wait until this wears off naturally – this generally takes 3-4 months.

First of all, after installing the decking boards, make sure that they are clean and the grains of the wood are fully open so that the Star brite® Outdoor Wood Protector can penetrate inside the fibers. **This is key to ensuring efficient, long-lasting protection.**

To do this, clean the patio with plain water using a low-pressure spray (avoid high-pressure sprays at all costs!) This will remove all dust that is encrusted in the fiber. Tropical woods that are sometimes very oily, such as teak and ipe, quickly become saturated with dust, especially if some of the decking boards have had to be sanded to fit. If the wood has been stocked for several weeks before being laid, it is a good idea to use the Star brite® Color Restorer and Cleaner for better results.

Afterwards, leave the decking boards to dry completely.

Recommended tools: brush/broom for surfaces up to 30m². We also recommend using a high-pressure cleaner (maximum 10-15 bars) or a buffer fitted with a medium or hard brush.

1.2. Applying the Protector

The Protector can be applied once the wood is absolutely dry, the grains have been opened and are free of any dirt or wood dust.

A minimum of 24 hours of a forecasted dry spell without rain is necessary to allow the Protector to polymerize completely. Shake the container well or mix thoroughly before use.

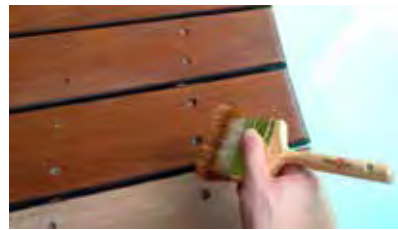

Apply on one small section at a time, using a brush or roller. Take care to ensure that the Protector is spread well, using as little of the product as possible. The long-lasting efficiency of the product depends on how **well the Star brite® Wood Protector soaked into the fibres of the wood!**

The Protector should be dry to the touch after approximately 30 minutes, at an average air temperature of 18-20°C. If it is not yet dry, wipe off any surplus product using a clean cloth.

Recommended tools:

Smooth or ribbed surfaces: roller, brush, cloth.

Single-coat product to be applied very thinly. Do not try to saturate the wood. Do not apply in very hot weather and do not treat in direct sunlight.

VIDEO

The **UNIVERSAL PROTECTOR** is recommended for all types of resinous woods (pine, douglas fir), oak and other types of timber.

The **OUTDOOR WOOD PROTECTOR** is recommended for all types of tropical wood (ipe, teak, tali, etc.).

The benefits of Star brite® Wood Protectors

- Do not alter the color and original texture of the wood.
- Protects against stains from water, grease, wine, chlorine, bird droppings, resin, etc.
- Excellent protection again UV rays and bad weather.
- Water repellent
- Easy to apply.
- SINGLE-COATING.
- A little goes a long way (20 m² per liter on average).
- Dries to the touch very fast, letting you work quickly.
- Does not flake with age.
- Long-lasting performance (1 to 2 years for flat surfaces, depending on exposure to the sun, frequency and intensity of sunshine, 3 years on upright surfaces).

Restoring and protecting your wooden patio

2] Restoring color to a gray patio

2.1. Cleaning the patio: a must!

When a patio begins to turn gray, sometimes even becoming blackish, stained by grease, wine, bad weather, etc., it needs a simple, extremely efficient solution to revive the wood and give it its color and texture back, making it look like new.

This is where the Star brite® Color Restorer and Cleaner comes into play! The product works efficiently on all types of tropical or resinous woods. It also removes any traces of oil that are left on the wood from a previous treatment.

Warnings for use: Take care to protect metal or painted items near to the patio and the bottom part of bay windows.

The benefits of the Color Restorer and Cleaner Star brite®

- Cleans and restores color in one application.
- Opens the grains of the wood to allow perfect penetration of the oil.
- Works rapidly.
- Safe for plants and gardens.

2.2. Applying the Color Restorer and Cleaner

Ideally, work out of direct sunlight.

Work one section at a time. Dampen down the surface to be treated. Spray or spread the undiluted Color Restorer and Cleaner on the wood. Leave to work for 2-3 minutes without allowing to dry, then brush using a broom or a buffer fitted with a medium or hard brush. Rinse well with plenty of water to remove all traces of product from the surface treated.

Leave to dry completely.

Repeat if necessary, or on parts that are still stained.

3,7 litres
Coverage:
30 à 35 m²
Ref. 1100

1 litre
Coverage:
8 à 10 m²
Ref. 1132

Wait until the wood is ABSOLUTELY DRY before applying the Star brite Outdoor Wood Protector.

Recommended tools: brush/broom for surfaces up to 30m². We can also recommend using a buffer fitted with a medium or hard brush. To rinse surfaces larger than 30 m², we recommend using a high-pressure jet to achieve a stronger spray. However, the pressure must not exceed a maximum of 30 bars.

You can rub stubborn, localized stains, with steel wool to achieve a better result.

2.3. Applying the Protector: see page 8

3] Standard patio maintenance throughout the year

Rain and UV rays are the two elements that affect the Protector the most. As soon as you notice that parts of the surface are becoming lighter in color, apply a very thin coating of Protector. This blends perfectly with the previous coating.

The next season, if the patio is in an acceptable condition, use the Color Restorer and Cleaner according to instructions for standard use.

It does not matter if there are still traces of Protector on the wood from a previous treatment, as these will blend with the new coating of Protector, which should be applied according to instructions for standard use.

Please note: vertical surfaces only need to be treated every 3 years or more.

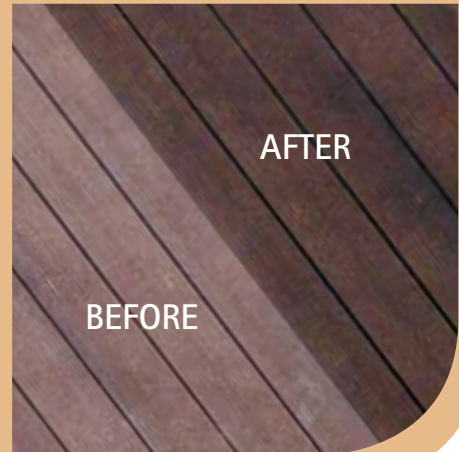

Wood composite patios

Wood composite is a mixture of wood and plastic fibers. The latter are often recycled and include polypropylene, polyethylene or PVC. The wood/resin ratio differs between manufacturers, as does the quality.

Wood composite tends to be colored all the way through and is non-biodegradable. This brings many advantages in terms of maintenance, compared to wood, which turns gray over time. However, the material is still porous and this does not prevent grease, wine, dirt and tree sap from penetrating the pores or staining the surface. This makes it very difficult to get rid of these encrusted stains without the risk of discoloring the surface by using too harsh a product. Furthermore, UV rays are likely to discolor the material over time to a certain extent, depending on the color and quality of the material.

Star brite® products, developed over the past 40 years for cleaning and protecting porous and colored materials, are designed to maintain and restore the color of wood composite, without affecting the quality of the material.

Stay safe! Even a wood composite patio that is not maintained is slippery and dangerous!

Protect your new patio

1] Maintaining a new patio as soon as it is delivered

1.1. Warning before applying the Protector

Wait at least 8 weeks after the installation of your new decking boards before beginning protective treatment.

After having allowed the newly fitted decking boards to rest for at least 2 months, clean thoroughly using the Star brite® Wood Composite Cleaner. If there are any stubborn, encrusted stains, use the Star brite® Wood Composite Stain Remover on the stains, following the instructions carefully.

Try out the product on a corner to ensure that you are happy with the final appearance.

1.2. Applying the Protector

When the Protector is applied, the color of the decking board or composite slab will darken slightly, giving a wet wood appearance as if it has just rained or has been washed.

Apply **JUST ONE VERY THIN COAT** of the Protector, ideally using a wide brush. Allow to dry for 1 to 2 hours, depending on the outside temperature. The product polymerises completely within 24 hours.

If rings start appearing when you start brushing and you notice that the coating is not even or is not adhering well, we recommend cleaning again before continuing further.

Do not apply in very hot weather and do not work in direct sunlight.

The Protector is dry to the touch in approximately 30 minutes and polymerises completely within 24 hours.

Recommended tool: wide brush.

Wood Composite Protector Aqueous phase

Ensures excellent protection for any type of wood composite. Protects against discoloration, prevents grease stains and other types of dirt. Designed for easy, everyday care of the surface. This protector returns color to gray, aging wood composite decking boards. «Wet wood» effect. Long-lasting protection. For horizontal and vertical surfaces.

The benefits of the Star brite® Wood Composite Protector

- Very low concentration of VOC
- Aqueous phase
- Breathable product
- Avoids stains from grease, wine and other environmental aggressions.
- Revives the colors of wood composite
- Quick-drying

Restoring and protecting your wood composite patio

2] Cleaning and restoring a dirty, discolored patio

It is often the case that decking boards begin to discolor after several months or years. The Star brite Composite Wood Protector is the best way of bringing back color to wood composite decking boards.

2.1. Cleaning

Your patio needs cleaning from time to time to make sure that it stays in good condition and does not become slippery over time.

If your patio is very dirty or has not been maintained for several months, or if you would like to get rid of stubborn or encrusted stains, we recommend using a stronger product that can be applied to the area in question or used for the whole surface.

2.2. Applying the Cleaner and Stain Remover: choosing the right product

2.2.1. If your patio is cleaned regularly or only lightly soiled:

Use the Star brite® Wood Composite Cleaner. Highly concentrated, biodegradable product. Dilute 1 part Wood Composite Cleaner in a bucket of (preferably hot) water. Spread the product over the surface and leave to work for 5 to 10 minutes (without letting the product dry). Rub using a hard broom or high-pressure cleaner (maximum 15 bars). Rinse off thoroughly. Allow to dry and repeat if the desired result has not been achieved. Double the dose if necessary.

2.2.2. If your patio is heavily soiled with encrusted stains:

Use the Star brite® Wood Composite Stain Remover. Plant-based biodegradable, sustainable product. Dilute 1 part Wood Composite Stain Remover to 5 to 10 parts water, depending on the degree of soiling of the surface. Spread the product over the surface and leave to work for 5 to 7 minutes. Rub using a hard broom or high-pressure cleaner (maximum 15 bars).

Allow to dry and repeat if the desired result has not been achieved. Increase the dose if necessary.

2.2.3. Removing stubborn, localized stains:

Apply the Wood Composite Stain Remover straight onto the stain. Leave to work for a maximum of 5 to 10 minutes. Rub gently by hand using a brush and rinse off thoroughly. Repeat the treatment if required until the stain has disappeared, checking that there is no discoloration once the surface has dried between treatments.

Recommended tools: Hard broom, high-pressure cleaner, buffer.

2.3. Protecting your surfaces by applying the Wood Composite Protector: see page 11

3] Standard patio maintenance throughout the year

Clean your patio regularly using Star brite® Wood Composite Cleaner and protect your patio at least once a year using the Star brite® Wood Composite Protector.

Tip: reapply a coating of Protector before autumn if required to ensure good protection throughout the winter season.

1 litre
Treats up to 200 m²
Ref. 1432

Concentrated Wood Composite Cleaner

Cleans wood composite boards deep down. Eliminates grease, wine and water stains, dirt etc.
Acts directly in the fibers of the material without damaging or discoloring the surface.
The Wood Composite Cleaner has a neutral pH, contains no aggressive ingredients, no bleaching agents, and does not damage lawns or plants.
Biodegradable.
Concentrated.

500 ml
Treats up to 10 m²
Ref. 1415

Grease and Stubborn Stain Remover for Wood Composite

High-performance, concentrated plant extract.
High-performance stain remover for eliminating grease spot stains or other stubborn stains from wood composite decking boards.
Designed for cleaning heavily soiled surfaces. Can be diluted with water. Follow instructions for use carefully.
Biodegradable.

The main ingredient in this stain-remover has won the French Pierre Potier award for the use of innovative chemical substances within the context of sustainable development.

The benefits of Star brite® Wood Composite Cleaner and Wood Composite Stain Remover

- **Wood Composite Cleaner:**
 - Biodegradable
 - Concentrated – 1 liter treats up to 200 m²
 - Works deep down
 - Does not discolor the surface
 - Safe for plants and gardens
- **Wood Composite Stain Remover:**
 - Biodegradable
 - Works deep down

Stone patios, surrounds

Maintenance of stone (natural stone, concrete, reconstituted stone, interlocking slabs, etc.)

The Star brite® Home Care range includes 3 high-performance maintenance products for all types of stone, two cleaners and one protector.

The Stone Cleaner works by oxygenizing the stains and dirt; the Stone Protector is a breathable, aqueous phase product with a low concentration of VOC.

The Rust Stain Detergent works specifically on stubborn, encrusted rust stains.

These products are safe for any items near to the stone surface (plants, flowers, grass, etc.).

3,7 litres
Treats

Rust Stain Detergent

Designed to remove encrusted rust in any type of natural stone, reconstituted stone, concrete, etc.)

Artificial grass patios

NOVELTY
2015

Artificial grass floors are always tricky to maintain, especially on a balcony, where it is difficult, if not impossible, to clean them thoroughly and rinse as required. The Star brite® range includes a **ready-to-use, no-rinse** cleaning product to clean artificial grass, removing grease and reviving the individual fibers. All you need to do is spray a little of the product onto the surface to be treated, spread all over and rub lightly using a soft brush.

Artificial Grass Cleaner

Ready to use.
Cleans and refreshes synthetic grass in just one treatment.
A no-rinse product.
Revives the synthetic fiber without any chance of damaging it.
Easy to use, all you need to do is spray on the product and brush the fiber with a medium-bristle broom. The product dries quickly.

NO-RINSE

BEFORE

RENOVATED

PROTECTED

Garden sheds, gates, carports

Retains
the original
look of wood

Wooden sheds are always exposed to the elements and need regular maintenance to prevent them from discoloring and turning black.

The Star brite® Home Care line includes 2 types of protection for your wooden shed.

An aqueous phase protector with a low concentration of VOC, which helps preserve the natural color of the wood, and an extra long-lasting single-coat solvent phase protector.

The first product provides invisible protection, which needs to be reapplied approximately every two years. It is very easy to apply.

The second product provides much longer protection. The single-coat protector has the benefit of being easy to apply, so that the wood is not damaged.

These two Protectors are also suitable for protecting all vertical wooden surfaces: carports, screening, wooden panels, games, etc.

To restore discolored and dirty surfaces, use Star brite® Cleaner and Color Restorer.

Garden Shed Protector Aqueous Phase

Protects any type of resinous woods, douglas fir, high temperature or autoclave-treated pine and tropical wood (tali, teak, ipe, etc.)

Aqueous phase product with a very low concentration of VOC – no harsh odor.

Breathable product.

Preserves the appearance, feel and original color of the wood.

Does not shine.

Protects from food stains (oil, wine, etc.), bird droppings, resin deposits etc.

Water-repellent and anti-stain.

Colorless.

Anti-UV.

Prevents discoloration.

Makes wood maintenance very easy!

For all wooden panels, screening, lattice-work, fencing, garden sheds, outdoor play equipment etc.

Also excellent for use indoors. Easy application with a synthetic sponge.

Wooden furniture

Wood is a natural, living element of our environment. Whatever form it is used in, it is crucial to maintain it and protect it against all environmental aggressions. And because good maintenance ensures that your equipment lasts a long time, Star brite® recommends that you protect your wooden furniture.

Star brite products are suitable for use on all types of tropical or European wood.

The main types of wood treated: Teak (Teak Protector or Outdoor Wood Protector), black locust (Black Locust Protector), eucalyptus, acacia, red cedar, pine, etc. (Outdoor Wood Protector).

Whenever you purchase new garden furniture, you should always ask yourself whether or not it needs protecting.

Star brite recommends protecting it immediately if the manufacturer has not already done so.

Protecting your new furniture

1] Maintaining new furniture as soon as it is delivered

1.1. Warning before applying the Protector

Ensure that the wood has not been treated with a protective coating while in the factory. If this is the case, wait until this wears off naturally – this generally takes 3-4 months.

Wood is very often sanded down before leaving the factory.

First of all, make sure that the wood is clean and the grains of the wood are fully open so that the Protector can penetrate inside the fiber. **This is the key to achieving long-lasting protection.**

To do this, clean the furniture with plain water using a low-pressure spray (avoid high-pressure sprays at all costs) and a soft brush. This will remove all dust that is encrusted in the fiber. Tropical woods that are sometimes very oily, such as teak, quickly become saturated with dust, especially as a result of sanding.

Afterwards, leave to dry completely.

1.2. Applying the Protector

The Protector can be applied once the wood is absolutely dry, the grains have been opened and are free of any dirt or wood dust.

Shake the container well or mix thoroughly before use.

Apply on one small section at a time. Take care to ensure that the Protector is spread well, using as **little of the product as possible**. The long-lasting efficiency of the product depends on how **well the Star brite Wood Protector has soaked into the fibers of the wood**.

The Protector is dry to the touch after approximately 30 minutes at an average temperature of 18-20 °C. If it is not yet dry, wipe off any surplus product using a cloth.

Protect the furniture from the rain for 24 hours so that the Protector can polymerise fully.

Recommended tools:

Disposable sponge brush or a clean cotton cloth.

**Single-coat product to be applied very thinly.
Do not try to saturate the wood.**

Tips: Bring your loungers, chairs, benches and other furniture under cover for the winter. These only need treating every three years on average. This leaves the table top to treat once a year, requiring no more than an hour's work.

Do not cover your table with an airtight cover as this may cause mold to form. Good quality garden furniture is designed to stay outside all year long.

The benefits of the Star brite® Outdoor Wood Protectors

- Does not alter the color and original texture of the wood
- Easy to apply
- A little goes a very long way (15 to 20 m² per liter)
- Does not flake with age
- Wears off naturally over time
- Protects against stains from water, grease, wine, bird droppings, etc.
- Water-repellent
- Restores softness to the wood and makes it look like new again
- Excellent protection against UV rays and bad weather.
- Long-lasting performance (1 to 2 years for flat surfaces, depending on exposure to the sun, frequency and intensity of sunshine). At least 4-5 years for vertical surfaces.

Restoring and protecting your wooden furniture

2] Restoring wooden garden furniture

2.1. Cleaning the furniture: a must!

When furniture begins to turn gray, sometimes even becoming blackish, stained by grease, wine, bad weather, etc., it needs a simple, extremely efficient solution to revive the wood and give it its color and texture back, making it look like new. **This also applies to very old furniture that has not been maintained for years and seems beyond repair.**

This is where the Star brite® Color Restorer and Cleaner comes into play! The product works efficiently on all types of tropical or resinous woods. It also removes any traces of oil that are left on the wood from a previous treatment.

The benefits of the Star brite® Color Restorer and Cleaner

- Cleans and restores color in one application
- Essential preparation before applying a Protector
- Opens the grains of the wood to allow perfect penetration of the oil
- Acts rapidly
- Safe for plants and surrounding grass

2.2. Applying the Color Restorer and Cleaner

Work on one small section at a time. Dampen the surface to be treated a little, or spread the neat Color Restorer and Cleaner directly onto the wood if this very dirty or discolored. Allow to work for 1 2 minutes, making sure that the product does not dry, then rub using steel wool. The treatment is very messy.

Rinse well with plenty of water to remove all traces of product from the surface treated. Leave to dry completely.

Repeat if necessary, or on parts that are still stained.

Wait until the wood is ABSOLUTELY DRY before applying the Star brite® Protector.

Recommended tools: steel wool or hand-held brush with hard bristles.

Warnings for use: cover all metal or painted objects that are close to the area being treated.

2.3. Applying the Protector: see page 20

3] Standard furniture maintenance throughout the year

Rain and UV rays are the two elements that affect the Protector the most. As soon as you notice that parts of the surface are becoming lighter in color, reapply a very thin coating of Protector. This blends perfectly with the previous coating.

The next season, if the furniture is in an acceptable condition, use the Color Restorer and Cleaner according to instructions for standard use.

It does not matter if there are still traces of Protector on the wood from a previous treatment, as these will blend with the new coating of Protector, which should be applied according to instructions for standard use.

Please note: vertical surfaces will only need to be treated every 3 years or more (see pages 8, 9 and 15).

Resin furniture, resin wicker, polywood

The quality of **resin wicker** varies depending on the quality of the wickerwork. Strands may dry out, and only one strand needs to break for the furniture to become unusable.

The Star brite® Resin Wicker Protective Cleaner is very user-friendly, is applied **WITHOUT WATER**, protects new furniture, restores older furniture and ensures improved frost-resistance.

Polywood is a material that stains easily, mainly due to its porosity and composition. This material is very sensitive to UV rays and bad weather. These cause it to discolor and become increasingly porous.

The Star brite® Wood Composite and Polywood Protector lets you protect polywood against grease, wine and water stains, and against environmental aggressions, while still letting the material breath.

The Star brite® Wood Composite Stain Remover lets you remove even the most stubborn stains on plywood, without damaging the surface.

These two products enable polywood furniture to be perfectly restored, even when several years old.

Resin Wicker Protector and Cleaner

Cleans, protects and nourishes resin wicker from the chance of discoloration and cracking due to the effects of UV rays.

Lets you enjoy your furniture for longer.

650 ml
Ref. 4822

Polywood and Wood Composite Stain Remover

High-performance, concentrated plant extract.

Powerful stain-remover that gets rid of grease, wine and other stains on polywood furniture or other composites.

Biodegradable product. Use neat or diluted. Restores aged, discolored polywood.

The main ingredient in this stain-remover has won the French Pierre Potier award for the use of innovative chemical substances in the context of sustainable development.

Designed for cleaning heavily soiled surfaces. Can be diluted with water.

500 ml
Ref. 1433

Polywood, Wood Composite and Rom® Protector

Protects polywood, wood composite and Rom® furniture

Aqueous phase, very low concentration of VOC.

Rapid drying - no aggressive odor.

Breathable, single-coat product.

Protects against wine, grease, oil, water stains, etc.

Withstands UV rays.

Refreshes and brings back color.

250 ml
Ref. 1608

Wood composite furniture

Metal furniture

Powder coated, polyester or polyurethane powder surfaces are porous. Stains get encrusted easily in the material, making them very difficult to remove. It is essential to use products that can be used safely on these surfaces, without the risk of damaging them.

650 ml
Ref. 4622

Painted Metal Furniture Cleaner

Cleans painted metal surfaces and gets rid of encrusted stains deep down.

Excellent for powder-coated metal furniture (polyurethane, polyester powder, etc.)

Plastic furniture

Mat or lacquered resin furniture also needs regular maintenance. It is very sensitive to the effects of UV rays, bad weather and stains. Protection decreases rapidly with the effect of UV rays and porosity increases. This lets through stains and dirt, which makes them very difficult to remove without damaging the material. Star brite® produces a unique product that cleans inside the material without damaging the surface.

Plastic Furniture Cleaner

Cleans deep down, restores and protects mat and lacquered resin furniture.

Acts instantaneously.

Does not damage the shine of lacquered furniture.

Excellent for maintaining polyethylene furniture.

650 ml
Ref. 4422

Batyline®/Textilène® furniture

Batyline®, Textilène®, and technical coated material etc. are porous and are – contrary to popular belief – very difficult to clean.

The Star brite® Cleaner has been designed to remove and clean inside the material instantly, without damaging the surface.

Textilène® Cleaner

Special cleaner for coated fabrics, resin wicker, Textilène®, Batyline®, and PVC.

Excellent detergent for polyethylene furniture.

Does not attack the material.

Acts instantaneously.

650 ml
Ref. 4322

Ceramic tables

Garden ornaments, ceramic furniture, static barbecues made out of concrete or reconstituted stone are also continuously subjected to bad weather. After a while, these also need to be maintained every year to avoid deterioration, or the development of mold and other stains in the pores of these materials.

Star brite® produces a fat- and water-repellent product that provides waterproof protection against the harmful effects of water, humidity and pollutants. This is a breathable product, with a low concentration of VOC, which does not affect the original appearance.

Ceramic Protector

Protects and renders reconstituted stone, concrete and any type of porous stone surface waterproof.

Oil and water-repellent.

Single-coating.

Breathable.

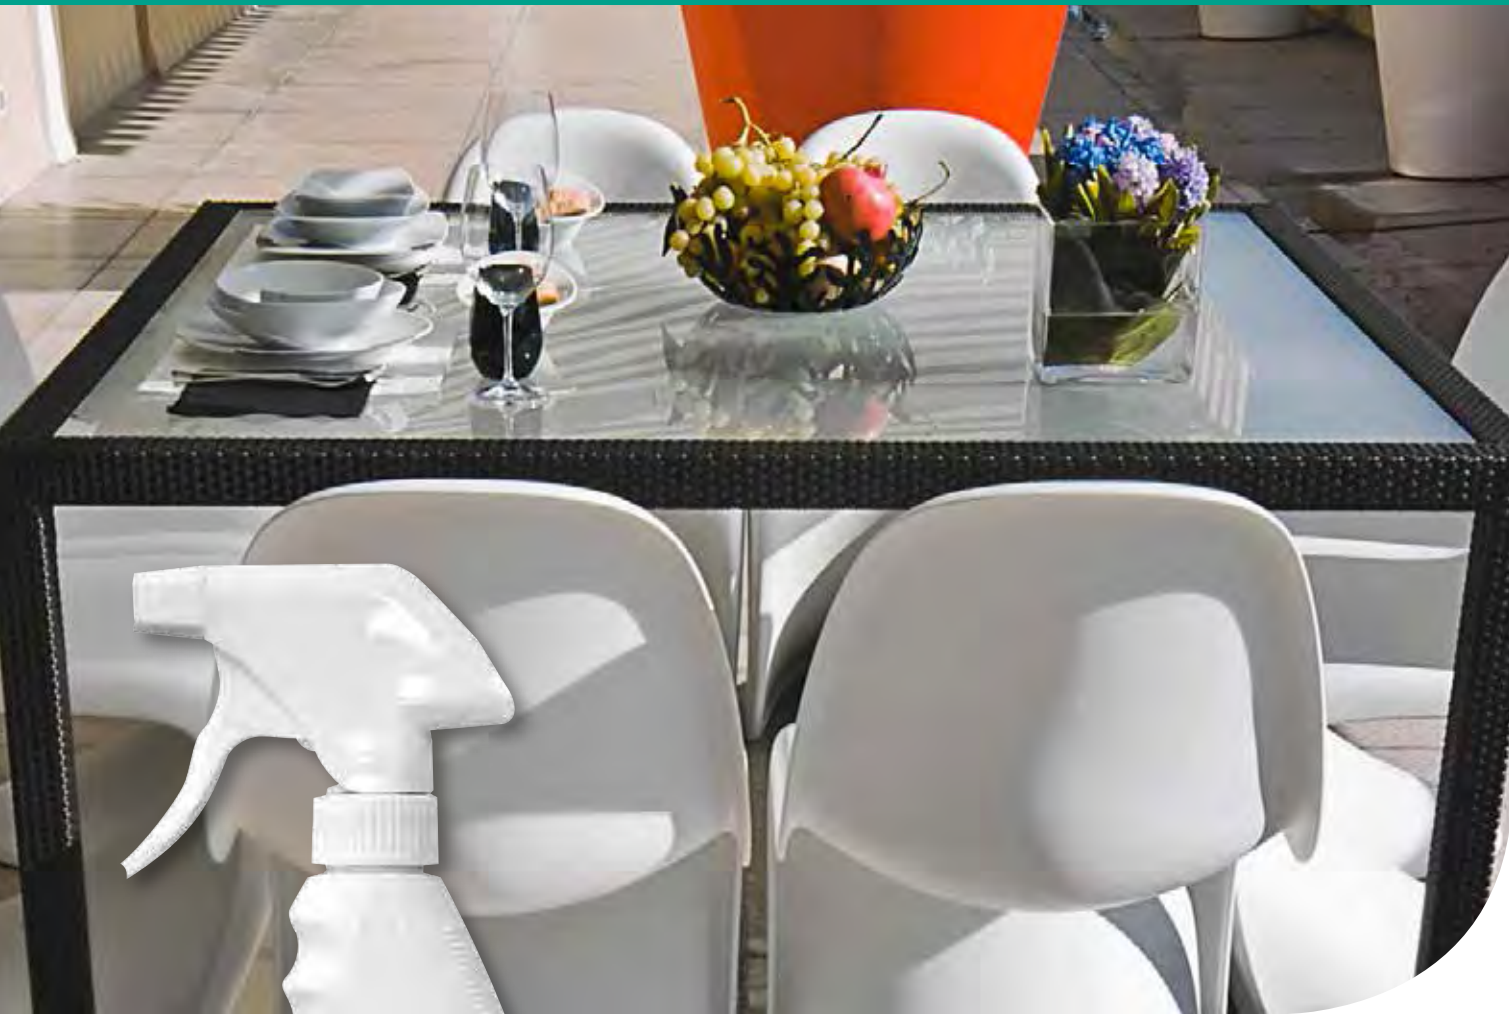

250 ml

Ref. 1732

Restoring and protecting your above-ground swimming pool

Above-ground or part in/part out swimming pools are becoming increasingly common and the first pools are beginning to show their age, particularly where the wooden casing is concerned. Whether the wood is a European or tropical variety, it still turns gray over the years. Star brite® produces a whole range of efficient cleaners and protectors to revive the pool surround, making it look like new again.

Not only does this make the pool look better, but it also makes the whole property look more prestigious.

The key advantages of the Star brite® Protector include preservation of the original appearance of the wood, an extremely long-lasting effect (especially on vertical surfaces) and no flaking over time. Furthermore, there is no need to strip the surface you are restoring before treatment.

Stainless Steel Cleaner and Protector

Ideal for treating swimming pool scale and corrosion on stainless steel caused, amongst other things, by release of chlorine.

Cleans and polishes chrome, stainless steel, brass and copper.

Protects against corrosion, discoloration, stains, and rust spots.

Easy to use: cleans, polishes and protects in one go.

Bonds to the metal to provide lasting protection. Leaves a brilliant shine.

Fuel treatment

Resolves and prevents fuel and ethanol-related problems

Star Tron® is a completely new fuel treatment based on the natural production of enzymes. Star Tron® uses highly specialized enzymes to modify the combustion of petrol and diesel fuels to make their combustion more complete and uniform. This same combination of enzymes cleans the fuel supply line and the combustion chambers, stabilizes the chemical formula of the fuel and reduces emissions from the engine.

Star Tron®, the multifunction fuel additive for all fuels, all year round.

Spring: no problems, easy starting.

Summer: fuel economy, maximum power for better performance.

Autumn: eliminates water and prepares for winter.

Winter: stabilizes the fuel and prevents separation of the phases.

Super absorbent microfiber REGGAE

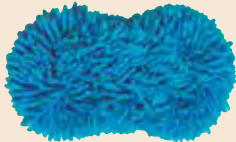

High quality cleaning system. Cleaning. Drying. Dusting.

Ref. 40105

Microfiber glove for cleaning the waterline

Microfiber glove for easy cleaning.
Does not damage the surface.

Ref. 40078

Microfiber Sponge

Microfibers for effortless cleaning.

Triangular articulated microfiber broom

This original broom, made from top-quality high-density microfiber, is perfect for drying all types of smooth surfaces and

windows easily. It can be adjusted for different angles of surface, making it ideal for swimming pool covers.

The perfect tool for applying the Star brite® Glass Cleaner.

Machine washable.

Ref. 40128

Wooden broom handle with screw-thread end

Wooden handle with screw-threaded end. Length 152 cm.

Ref. 40088

Telescopic broom handle

In high-quality aluminium. Triple anodized.

Telescopic handle with 2 anti-slip grips and a locking system for extending the handle from 94 to 183 cm.

Twin pawl system for wooden block brushes.

Ref. 40000

Telescopic broom handle Large size

Ideal for cleaning automatic swimming pool covers.

Light-weight but extremely strong. Made in triple anodized aluminium, with a telescopic handle with 2 anti-slip grips. Extends from 152 to 304 cm!

Twin pawl system for wooden block brushes.

A special air chamber allows it to float.

Ref. 40005

Wood block brushes

Recommended for cleaning the panels of automatic PVC swimming pool covers.

Made with thin high-density Star prene® fibers. The fiber ends have been treated to hold water and cleaning products better, allowing easier maintenance.

Varnished wooden block with anti-bump rubber edges.

* Star prene® is a light-weight polymer fiber which does not stain, discolor or become fragile. It withstands most chemical products and high temperatures. This modern material does not rot, mold or absorb smells.

Available with soft, medium and hard bristles.

Soft bristles: Ref. 40150 (yellow) Ref. 40150 (yellow)

Medium bristles: Ref. Ref. 40151 (blue)

Hard bristles: Ref. Ref. 40152 (white)

Foam brushes

Disposable brushes for applying maintenance products, including Star brite® Wood Protector.

Beveled brushes for getting between the grooves in teak table tops or between the bars on chairs.

Available in packs of three 3» brushes or in packs of 4 brushes of 4 different sizes.

Blister-packed foam brushes.

Contents:

Pack of 3 foam brushes 3 x 3» Ref. 3333

Pack of 4 assorted foam brushes (1 of each size): Ref. 3123

Stainless steel wool

Stainless steel wool pads for cleaning teak and other wood without altering the fibers. Does not rust.

Available in packs of 2.

Ref. 3450

Single pad.

Ref. 88450A3

Bucket

Polyethylene bucket, virtually unbreakable.

Volume: 13 liters.

Multipurpose.
